Dear Dr. Kolb:

I have received your letters of may 6 and May 18.

In attention to your first letter I should simply agree with your paragraph about checking the invoices with the least possible delay.

With reference to the electrical equipment your assumption about our current is correct: 115 volts a. c., 60 cycles up 500 W; but above 500 W it should be 220V and 60 c.

As for invoicing informations unfortunately I have no suggestion to make now. However during my next week trip to Rio I plan to send to you any details I may secure that might be helpful on this respect. Part of the difficulty however results from the fact that I should have the invoices in order to apply for the importlicences.

Now, with reference to your second letter may I inform:

- a) measuring range: 660 to 720 mm Hg
- b) local altitude: 635m
- c) 3-phase a/c: for 220V, 60 C.

With best regards,

Sincerely yours
